

Airport positioning

A conversation card for coordinated service operations

Fictionalized customer cues • Use approved product language in a real conversation

CUSTOMER CUES

- Gate changes reach teams at different times.
- Ramp and service work is disrupted.
- A small delay cascades across handoffs.

DISCOVERY PROMPTS

- Where does a gate change spread first?
- Which team learns about it last?
- What work has to be repeated or delayed?

POSITIONING MOVE

Connect the coordination gap to a more consistent view of changes across teams. Speak to the specific handoff before discussing implementation.

ROI CALCULATOR CONVERSATION

Use the approved ROI calculator with the client, not a made-up estimate. Confirm change events per period, time lost per event, teams affected, and the source of each assumption. Review the result together as a scenario to validate.

NEXT MOVE

Trace one gate-change handoff, test the assumptions, and bring in a specialist for technical detail.
