

Seaport positioning

A conversation card for distributed terminal operations

Fictionalized customer cues • Use approved product language in a real conversation

CUSTOMER CUES

- Equipment status gets lost between teams.
- Field updates arrive after a handoff.
- Terminal groups work from different views.

DISCOVERY PROMPTS

- Where does the handoff lose visibility?
- Who first notices the missed update?
- What task is delayed when status is unclear?

POSITIONING MOVE

Connect the stated handoff problem to a clearer shared status view. Keep the claim specific to the workflow the customer described.

ROI CALCULATOR CONVERSATION

Use the approved ROI calculator with the client, not a made-up estimate. Confirm handoffs per period, time lost per handoff, people affected, and the source of each assumption. Review the result together as a scenario to validate.

NEXT MOVE

Map one equipment handoff, test the assumptions, and bring in a specialist for technical detail.
